BDS, MFD RCSI, MDPH
Dentist with Special interest
in Orthodontics

DAMON ULTIMA

BRACKET PLACEMENT WORKSHOP

ABSTRACT

One of the most important steps along the orthodontic treatment journey is the bonding session, placing the brackets as accurately and as thoughtfully as possible will help set your case for a beautiful finish.

This is especially critical when using the Damon system and it's variable torque options as this add layer of complexity to the session

In this workshop Dr. Ali will be going through the whole workflow used at Borgan orthodontics at bonding session, a workflow that has been tried and test thousands of times for the last 10 years. The cherry on the top will be the opportunity to practice the placement for the Damon Ultima, the most advanced passive self ligation system in the world.

Dr. Ali will also discuss the pano-repo session workflow and how to manage the brackets for ultimate bonding strength when repositioning.
